

## ARCHIVE-IN-A-BOX

*An eco-friendly way to store important business data*

### Gain More Control over Your Corporate Data

Archive-in-a-Box is an on-premises appliance that provides businesses with the ability to store terabytes to petabytes of corporate information.

Based on modern hardware design, the device's footprint takes up very little space. Starting with as little as 4U, or the height of two servers, the system stores about a petabyte of information and can scale to in excess of 15 petabytes in a single 42U rack.

Each company has a unique set of storage considerations, and our solution works with all types of content. Contracts? No problem. Unstructured data sets? We work with it. Video? Fine. Proprietary information? We keep it safe.

In addition, the product is easy to use. Appearing as a network drive, users simply drag and drop data into and out of it or just attach it to their application as a drive.

Another plus is it is eco-friendly. The Archive-in-a-Box requires relatively less power and consequently less cooling, unlike a Network Attached Storage (NAS) appliance, which requires constant power and cooling. The solution enables companies to reduce their carbon footprint while reducing operational expenses.

For a safe, convenient, and energy-efficient way to store sensitive information, take a closer look at our Archive-in-a-Box.

### The LT ZERO Difference

- ✓ **Cost Effective Storage**  
Reduces overall operational costs with lower costs per terabyte and reduced energy usage, lowering both CAPEX and OPEX.
- ✓ **Small Form Factor**  
Compact design for maximum efficiency without sacrificing performance.
- ✓ **Convenience**  
Simplifies on-premises data storage, handling terabytes to petabytes of information efficiently.
- ✓ **Flexibility**  
Supports direct attachment to applications and easy drag-and-drop data management via network drives.
- ✓ **Low Power Requirements**  
This approach helps your company cut costs and minimize its carbon footprint by reducing cooling needs and operational expenses.

### User Cases

Individuals who need to frequently reference or display archived items. This is particularly helpful for:

- Marketing personnel
- Financial departments
- Lawyers
- Data Scientists
- Researchers
- Historians
- Librarians
- AI/ML Engineers

### Wide Variety of Items

Archives can contain any digital asset including documents, photographs, audio recordings, video footage, and/or application specific datasets.

### Repurpose Content

Acquiring data, be it video footage, mapping data, DNA sequences or anything in between, is expensive. The Archive-in-a-Box provides a simple way to store and recall that information when it is needed later for new analysis or a new project.

## ARCHIVE-IN-A-BOX

### The Benefits of Deploying Archive-in-a-Box

#### Cost Effectiveness

- Low priced storage option
- As little as \$0.001 per GB per month
- No hidden fees

#### Environmentally Friendly

- Support corporate environmental initiatives
- Minimize energy usage
- Meet sustainability goals

#### Flexibility and Interoperability

- Support for open standards
- Avoid vendor lock in

#### Space Efficiency

- Reduce data center footprint

#### Reliability

- Data is air-gapped
- Safe from ransomware
- Store data for up to decades
